Toshiba MBF2300RC 300GB 10K 6Gbps SFF Serial Attached SCSI Hard Drive - Factory Refurbished

Reinforcing its strong market position in small form factor hard disk drives, Toshiba introduces a new high-performance, power-efficient enterprise class, 2.5-inch SAS hard drive offering industry leading storage capacity of up to 600GB. The MBF2-RC series drive features a 10,025 RPM spin speed, 6 Gb/sec SAS interface, and environmentally friendly low power consumption benefits.

With a top storage capacity of 600GB, Toshiba's newest small form factor drive equals the highest capacity point currently available within the entire 2.5 and 3.5-inch form factor enterprise class segments. In addition to the low power consumption design of 2.5-inch hard drives, the

MBF2-RC series features an enhanced power condition state technology enabling lower RPM spin speeds when not in use, allowing for up to 28% reduction in power consumption.

The MBF2-RC series drive is designed to support enterprise applications where reliability, high capacity, and performance are required. Specific applications include mid-range volume servers, mainstream storage arrays, blade and rackmount servers, and other business-critical, power-conscious, data-intensive systems.

Part Number: CA07173-B200

Compatibility:

This drive is compatible with any server that supports SFF (small form factor SAS drives).
