

32-Channel Serial to Parallel Converter with P-Channel Open Drain Outputs

Features

- ▶ Processed with HVCMOS® Technology
- ▶ Output voltages to -220V
- ▶ Source current minimum 60mA
- ▶ Shift register speed 8.0MHz
- ▶ Polarity and blanking inputs
- ▶ CMOS compatible inputs
- ▶ Forward and reverse shifting options
- ▶ Can be used with the HV5622 to provide 220V push-pull operation
- ▶ 44-lead PLCC surface mount package

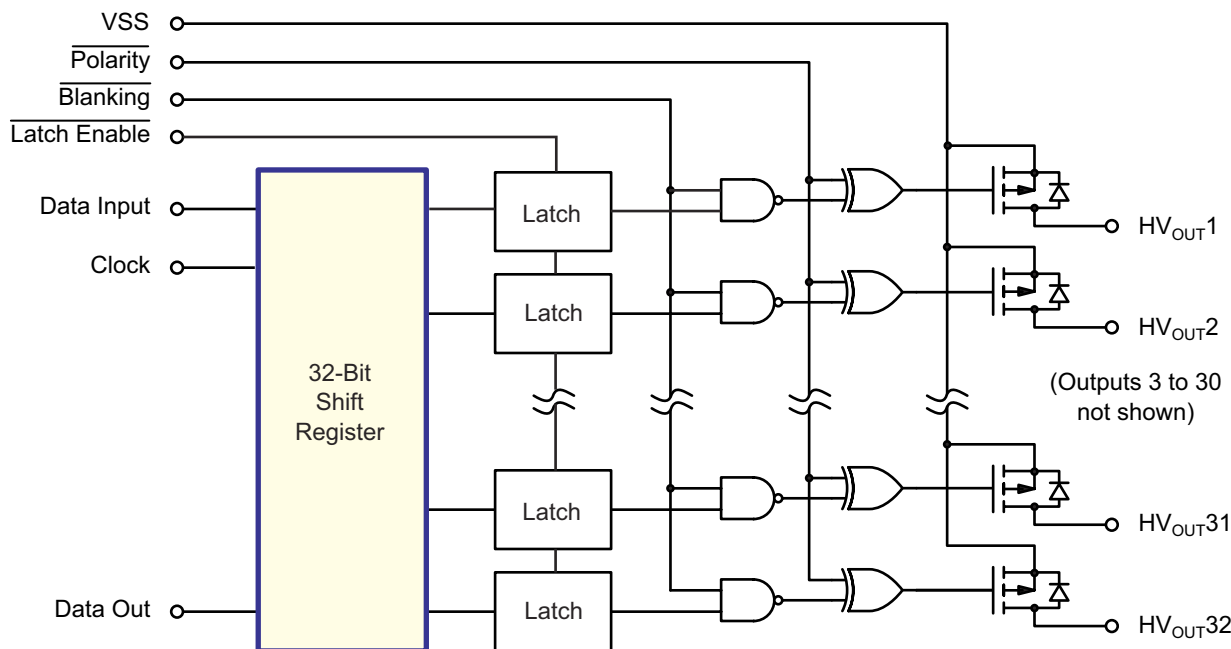

General Description

The HV4622 is a low-voltage serial to high-voltage parallel converter with P-Channel open drain outputs. This device has been designed for use as a driver for AC-electroluminescent displays. It can also be used in any application requiring multiple output high-voltage current source capabilities, such as driving inkjet and electrostatic print heads, plasma panels, or vacuum fluorescent displays.

This device consists of a 32-bit shift register, 32 data latches, and control logic to perform polarity and blanking functions. Data is shifted through the shift register on the logic high-to-low transition of the clock. The HV4622 shifts in the clockwise direction (when viewed from the top of the package). A data output buffer is provided for cascading devices. This output reflects the current status of the last bit of the shift register. The data in the shift register is latched when the latch enable pin is brought to logic high, and then returned to ground. If the latch enable pin is held high, the latch becomes transparent and the shift register data is directly reflected in the outputs.

For applications requiring active pull down as well as pull up, the HV4622 can be paired with the HV5622.

Absolute Maximum Ratings

Parameter	Value
Supply voltage, V_{DD}	+0.5V to -16V
Output voltage, V_{PP}	+0.5V to -240V
Logic input levels	+0.5V to V_{DD} -0.3V
Ground current ¹	1.5A
Continuous total power dissipation ²	1200mW
Operating temperature range	-40°C to +85°C
Storage temperature range	-65°C to +150°C
Lead temperature (1.6mm from case for 10 seconds)	260°C

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to V_{SS} .

Notes:

- Duty cycle limited by the total power dissipated in the package.
- For operation above 25°C ambient derate linearly to maximum operating temperature at 20mW/°C.
