

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

Regional Information

Some information contained in this document may vary from country to country. Before using any NEC product in your application, please contact the NEC office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

INTRODUCTION

Target Readers This manual is intended for users who design and develop application systems using the V850/SV1™.

Purpose The purpose of this manual is to describe the proper operation of the IE-703040-MC-EM1 and its basic specifications.

Organization This manual is divided into the following parts.

- Overview
- Names and functions of components
- Cautions

How to Read This Manual It is assumed that the reader of this manual has general knowledge in the fields of electrical engineering, logic circuits, and microcontrollers. The IE-703040-MC-EM1 is used connected to the IE-703002-MC in-circuit emulator. This manual explains the basic setup procedure and switch settings of the IE-703002-MC when it is connected to the IE-703040-MC-EM1. For the names and functions of parts, and the connection of elements, refer to the **IE-703002-MC User's Manual (U11595E)**.

To learn about the basic specifications and operation methods
→ Read this manual in the order of the **CONTENTS**.

To learn the operation methods and command functions, etc., of the IE-703002-MC and IE-703040-MC-EM1
→ Read the user's manual of the debugger (sold separately) that is used.

Conventions

Note: Footnote for item marked with **Note** in the text

Caution: Information requiring particular attention

Remark: Supplementary information

Numeral representation: Binary ... xxxx or xxxxB
Decimal ... xxxx
Hexadecimal ... xxxxH

Prefix indicating the power of 2 (address space, memory capacity):

K (kilo): $2^{10} = 1024$
M (mega): $2^{20} = 1024^2$

Terminology The meanings of terms used in this manual are listed below.

Target device	The device that is targeted for emulation.
Target system	The system (user-built system) that is targeted for debugging. This includes the target program and user-configured hardware.

Related Documents

When using this manual, refer to the following manuals.

The related documents indicated in this publication may include preliminary versions. However, preliminary versions are not marked as such.

CHAPTER 1 OVERVIEW

The IE-703040-MC-EM1 is an option board for the IE-703002-MC in-circuit emulator. By connecting the IE-703040-MC-EM1 and IE-703002-MC, hardware and software can be debugged efficiently in system development using the V850/SV1.

In this manual, the basic setup procedure and switch settings of the IE-703002-MC when using the IE-703040-MC-EM1 are described. For the names and functions of the parts of the IE-703002-MC, and for the connection of elements, refer to the **IE-703002-MC User's Manual (U11595E)**.

1.1 Hardware Configuration

- Notes**
- For further information, contact Daimaru Kogyo Co., Ltd.
Tokyo Electronics Department (TEL +81-3-3820-7112)
Osaka Electronics Department (TEL +81-6-6244-6672)
 - Cannot be used for PC98-NX series

1.2 Features (When Connected to IE-703002-MC)

- Maximum operating frequency: 20 MHz (at 3.3 to 5.0-V operation)
- Extremely lightweight and compact
- Higher equivalence with target device can be achieved by omitting buffer between signal cables.
- The following pins can be masked.
RESET, NMI, WAIT, HLDRQ
- Two methods of connection to target system:
 - Pod tip direct connection (For information on the pod, refer to the **IE-703002-MC User's Manual (U11595E)**)
 - Attach an extension probe (sold separately) to the pod tip for connection
- The dimensions of the IE-703040-MC-EM1 are as follows.

Parameter		Value
Power consumption (Max. value at 3.3-V supply voltage)		0.35 W (at 20-MHz operation frequency) ^{Note}
External dimensions (Refer to APPENDIX PACKAGE DRAWINGS)	Height	15 mm
	Length	194 mm
	Width	96 mm
Weight		160 g

Note 10.35 W when IE-703002-MC connected to IE-703040-MC-EM1

1.3 Function Specifications (When Connected to IE-703002-MC)

Parameter		Specification	
Emulation memory capacity	Internal ROM	256 Kbytes	
	External memory	In ROM-less mode	2 Mbytes
		When using iROM	1 Mbyte
Coverage memory capacity for execution/pass detection	Internal ROM	256 Kbytes	
	External memory	In ROM-less mode	2 Mbytes
		When using iROM	1 Mbyte
Coverage memory capacity for memory access detection	External memory	1 Mbyte	
Coverage memory capacity for branching entry number counting	Internal ROM	256 Kbytes	
	External memory	In ROM-less mode	2 Mbytes
		When using iROM	1 Mbyte

Caution Some of the functions may not be supported, depending on the debugger used.

1.4 System Configuration

The system configuration when connecting the IE-703002-MC to the IE-703040-MC-EM1 and a personal computer (PC-9800 series or PC/AT™ (or compatibles)) is shown below.

Figure 1-1. System Configuration

Remark

- <1> Personal computer (PC-9800 series or PC/AT or compatibles)
- <2> Debugger (sold separately)
- <3> PC interface board
(IE-70000-98-IF-B/IE-70000-98-IF-C, IE-70000-PC-IF-B/IE-70000-PC-IF-C: sold separately)
- <4> PC interface cable (included with IE-703002-MC)
- <5> In-circuit emulator (IE-703002-MC: sold separately)
- <6> In-circuit emulator option board (IE-703040-MC-EM1)
- <7> External logic probe (included with IE-703002-MC)
- <8> Socket for target connection (YQSOCKET176SDN: sold separately)
- <9> Extension probe (SC-100SD: sold separately)
- <10> Connector for emulator connection (YQPACK176SD: included)
- <11> Connector for target connection (NQPAC176SD: included)
- <12> Power adapter (IE-70000-MC-PS-B: sold separately)
- <13> AC100-V power cable (sold separately: included with IE-70000-MC-PS-B)
- <14> AC220-V power cable (sold separately: included with IE-70000-MC-PS-B)

1.5 Contents in Carton

The carton of the IE-703040-MC-EM1 contains a main unit, guarantee card, packing list, and accessory bag. Make sure that the accessory bag contains this manual and the connector accessories. If there are missing or damaged items, please contact an NEC sales representative or an NEC distributor.

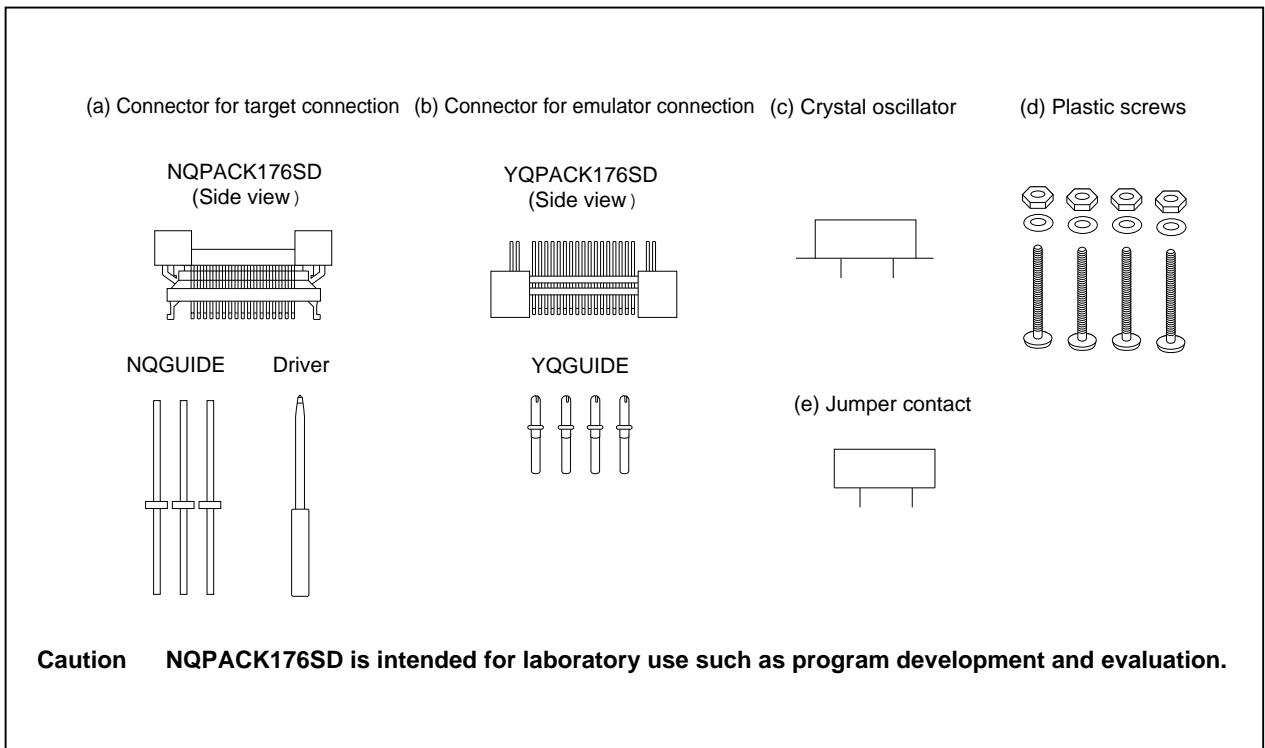

Figure 1-2. Contents in Carton

Check that the accessory bag contains this manual, an accessory list (× 1), and the following accessories.

- (a) Connector for target connection (NQPACK176SD) × 1
(including NQGUIDE × 3, driver × 1)
- (b) Connector for emulator connection (YQPACK176SD) × 1
(including YQGUIDE × 4)
- (c) Crystal oscillator (20-MHz, 8-pin type)
- (d) Plastic screws × 4
(including nuts and washer × 4)
- (e) Jumper contact × 1

Figure 1-3. Accessories

1.6 Connection between IE-703002-MC and IE-703040-MC-EM1

The procedure for connecting the IE-703002-MC and IE-703040-MC-EM1 is described below.

Caution Connect carefully so as not to break or bend connector pins.

- <1> Remove the pod cover (upper and lower) of the IE-703002-MC.
- <2> Replace the crystal oscillator mounted in the pod of the IE-703002-MC with the crystal oscillator supplied (20 MHz) or an arbitrary oscillator (user's frequency).
- <3> Set the PGA socket lever of the IE-703040-MC-EM1 to the OPEN position as shown in Figure 1-4 (b).
- <4> Connect the IE-703040-MC-EM1 to the PGA socket at the back of the IE-703002-MC pod (refer to Figure 1-4 (c)). When connecting, position the IE-703002-MC and IE-703040-MC-EM1 so that they are horizontal.
- <5> Set the PGA socket lever of the IE-703040-MC-EM1 to the CLOSE position as shown in Figure 1-4 (b).
- <6> Set the IE-703002-MC pod jumpers (JP1 to JP4).
Open JP1 and JP3 (Remove the jumper contact and attach the removed jumper contact to one of the jumper pins to avoid losing it.)
Retain the factory settings of JP2 (pins 1 and 2 shorted, and pins 5 and 6 shorted).
Short pins 2 and 3 of JP4.
- <7> Fix the IE-703040-MC-EM1 between the IE-703002-MC pod covers (upper and lower) with the plastic screws (supplied with the IE-703002-MC).
- <8> Fix the IE-703002-MC pod cover (upper) end with nylon rivets.

Remark For the JP1 setting, refer to **2.3 Illegal Access Detection ROM Setting**. For JP3 and JP4, refer to **2.4 CPU Operation Voltage Range Switch Setting**.

Figure 1-4. Connection between IE-703002-MC and IE-703040-MC-EM1 (1/2)

Figure 1-4. Connection between IE-703002-MC and IE-703040-MC-EM1 (2/2)

CHAPTER 2 NAMES AND FUNCTIONS OF COMPONENTS

This chapter describes the names, functions, and switch settings of components in the IE-703040-MC-EM1. For the details of the pod, jumper, and switch positions, etc., refer to the **IE-703002-MC User's Manual (U11595E)**.

2.1 Component Names and Functions of IE-703040-MC-EM1

Figure 2-1. IE-703040-MC-EM1

(1) TEST pins (TP5, TP11, TP12)

These are pins used for testing the analog signals of the standalone emulator.

- TP 5: GND
- TP 11: GND
- TP 12: GND

(2) JP1

This is a pin board for product check. Mount nothing on JP1.

(3) JP2, JP4

These are pin boards for product check. Use and retain the factory settings (pins 2 and 3 shorted) (For details, refer to **2.2 Clock Settings**)

(4) JP3

This is a pin board for supplying the subsystem clock. (For details, refer to **2.2 Clock Settings**)

(5) JP5

This is a jumper for switching the main system clock supply source.

(6) JP6

This is a pin board for product check. Use and retain the factory settings (pins 1 and 2 shorted).

(7) LED

LED for V_{PP}

ON: Voltage is applied to V_{PP}

OFF: Voltage is not applied to V_{PP}

(8) Connector for IE-703002-MC connection

This is a connector for connecting with the IE-703002-MC.

(9) Connector for target connection

This is a connector for connecting with the target system or the extension probe.

2.2 Clock Settings

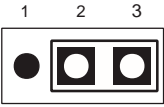

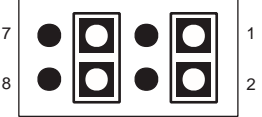

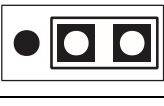

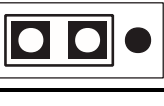

This section describes the clock settings.

For the position of the JP1 and JP2 in the IE-703040-MC-EM1, refer to Figure 2-1.

For the jumper switch position in the IE-703002-MC, refer to the **IE-703002-MC User's Manual (U11595E)**.

2.2.1 Main system clock setting

Table 2-1. Main System Clock Setting

Emulator Use Environment	Clock Supply Method	IE-703040-MC-EM1 Setting	IE-703002-MC Setting		
		JP1	SW1	SW2	JP2
When using emulator as standalone unit	Internal clock		ON	ON	
When using emulator with target system	Internal clock				
	Target clock ^{Note}				

Note The target clock supports only an oscillator (X2 cannot be used because it is not connected in the emulator).

Clock input by resonator is not supported.

2.2.2 Subsystem clock setting

Table 2-2. Subsystem Clock Setting

Emulator Use Environment	Clock Supply Method	IE-703040-MC-EM1 Setting
		JP3
When using emulator as standalone unit	Internal clock ^{Note 1}	Oscillator mounted (a 32.768-kHz oscillator is mounted when shipped) ^{Note 3}
When using emulator with target system	Internal clock ^{Note 1}	Oscillator mounted (a 32.768-kHz oscillator is mounted when shipped) ^{Note 3}
	Target clock ^{Note 2}	Pins 3 and 4 of JP3 are shorted ^{Note 4}

- Notes**
1. The internal clock does not support the clock input by an oscillator.
 2. The target clock supports only an oscillator (XT2 cannot be used because it is not connected in the emulator).
Clock input by oscillator is not supported.
 3. To use a subsystem clock frequency other than 32.768 kHz, remove the clock module on JP3 and mount any oscillator.
The specifications of JP3 are as follows.

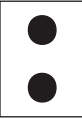

4. Prepare the short pin.

2.3 Illegal Access Detection ROM Setting

If using the IE-703002-MC for an in-circuit emulator for the V850/SV1 by connecting the IE-703040-MC-EM1, set JP1 of the IE-703002-MC as follows.

Table 2-3. JP1 Setting in IE-703002-MC

JP1		Description
Open ^{Note}		Illegal access detection ROM (mounted on IE-703040-MC-EM1) for V850/SV1 is used.

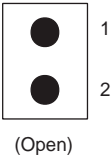

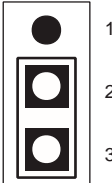

Note When JP1 is set open, keep the removed jumper contact attached to one pin as shown in the drawing on the right.

2.4 CPU Operation Voltage Range Switching Setting

If using the IE-703002-MC for an in-circuit emulator for the V850/SV1 by connecting the IE-703040-MC-EM1, set JP3 and JP4 of the IE-703002-MC as follows.

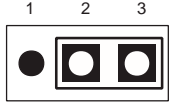

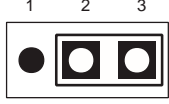

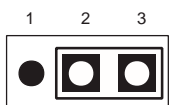

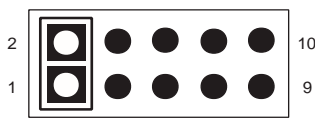

Table 2-4. JP3 and JP4 Setting in IE-703002-MC

JP3, JP4		Description
JP3	 (Open)	The operation voltage range of the IE-703002-MC is to 2 to 3.6 V
JP4		The operation voltage range of the target system is 2 to 4.5 V. (Use this setting since the operation voltage range of the V850/SV1 is 2 to 3.6 V.)

Caution By settings of JP3, JP4 above, when the power supply of the target system is on, the IE-703002-MC operates at the same voltage as the target system.
The IE-703002-MC always operates at 3.3 V when the power supply of the target system is off and using emulator as standalone unit.

[MEMO]

CHAPTER 3 FACTORY SETTINGS

Item	Description	Remark
JP1	Oscillator not mounted	Pin board for product check
JP2		Jumper switch for product check
JP3	Oscillator mounted	32.768-kHz clock supplied for subsystem clock
JP4		Jumper switch for product check
JP5		Internal clock used for main system clock
JP6		Jumper switch for product check

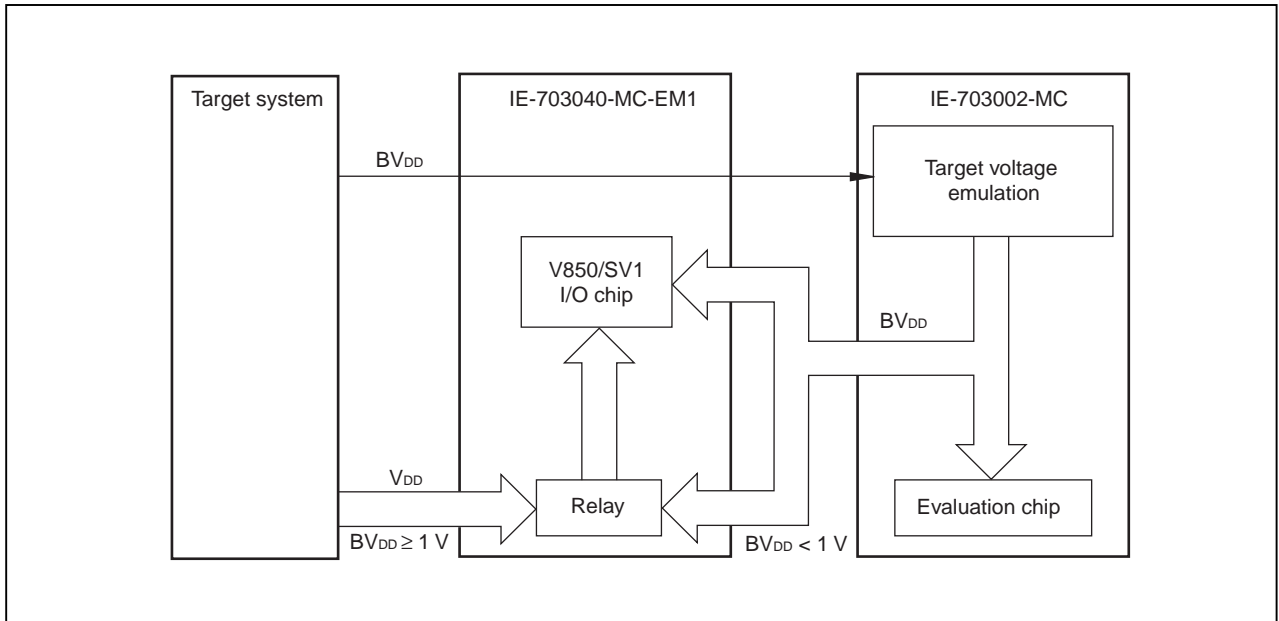

[MEMO]

CHAPTER 4 CAUTIONS

4.1 V_{DD} and BV_{DD} of Target System

- (1) BV_{DD} in the target system is not connected to BV_{DD} in the evaluation chip in the IE-703002-MC.
The IE-703002-MC uses BV_{DD} of the target system for the following purposes:
 - Power ON/OFF detection of target system
 - BV_{DD} emulation of target system
- (2) When the voltage of the target system is 1 V or higher, the evaluation chip in the emulator operates using the supply of V_{DD} from the target system. The power consumption is equivalent to that of the V850/SV1.
- (3) When the voltage of the target system is lower than 1 V, the emulator recognizes the target system power is off and operates at 3.3 V.

Figure 4-1. Schematic Diagram of Power Supply Acquisition

4.2 NMI Signal

The input signal (NMI signal) from the target system is delayed ($t_{pD} = 0.25$ ns (TYP.)) because it passes through QS3125 (Q switch) before it is input to the I/O chip of the emulator.

In addition, the DC characteristics change. The input voltage becomes $V_{IH} = 2.0$ V (MIN.), $V_{IL} = 0.8$ V (MAX.), and the input current becomes $I_{IN} = \pm 0.5$ μ A (MAX.).

Figure 4-2. NMI Signal Flow Path

4.3 V_{PP} Signal

The V_{PP} signal from the target system is connected to LED via a 330- Ω resistor in the emulator. It is not connected to the evaluation chip in the emulator.

Figure 4-3. V_{PP} Signal Flow Path

4.4 NMI Signal Mask Function

When using the P00/NMI pin in the port mode, do not mask the NMI signal.

4.5 Bus Interface Pin

The operation of the pin for the bus interface differs between the emulator and the target device as follows.

Table 4-1. Bus Interface Pin Operation List (1/2)
(a) During break

Pin Name	Internal Memory							External Memory				
	Memory Used by Emulator			Internal ROM	Internal RAM		Internal Peripheral I/O		Emulation RAM		Target System	
	F	R	W	R	R	W	R	W	R	W	R	W
A16 to A21	Hold the last accessed address							Active		Active		
AD0 to AD15	Hi-Z							Active		Active		
ASTB	H							Active		Active		
$\overline{R/W}$	H							Active		Active		
\overline{DSTB}	H							H		Active		
\overline{LBEN}	H							Active		Active		
\overline{UBEN}	H							Active		Active		
\overline{WAIT}	Invalid							Maskable		Maskable		
\overline{HLDRQ}	Maskable							Maskable		Maskable		
\overline{HLDAK}	H or L							H or L		H or L		
\overline{WRL}	H							H		H	Note	
\overline{WRH}	H							H		H	Note	
\overline{RD}	H							H		Note	H	

Note Active

- Remarks**
- F: Fetch

R: Read

W: Write
 - H: High-level output

L: Low-level output

Hi-Z: High-impedance

Table 4-1. Bus Interface Pin Operation List (2/2)
(b) During run

Pin Name	Internal Memory							External Memory					
	Internal ROM		Internal RAM			Internal Peripheral I/O		Emulation RAM			Target System		
	F	R	F	R	W	R	W	F	R	W	F	R	W
A16 to A21	Hold the last accessed address							Active			Active		
AD0 to AD15	Hi-Z							Active			Active		
ASTB	H							Active			Active		
$\overline{R/W}$	H							Active			Active		
\overline{DSTB}	H							H			Active		
\overline{LBEN}	H							Active			Active		
\overline{UBEN}	H							Active			Active		
\overline{WAIT}	Invalid							Maskable			Maskable		
\overline{HLDRQ}	Maskable							Maskable			Maskable		
\overline{HLDAK}	H or L							H or L			H or L		
\overline{WRL}	H							H			H		Note
\overline{WRH}	H							H			H		Note
\overline{RD}	H							H			Note		H

Note Active

- Remarks**
1. F: Fetch
R: Read
W: Write
 2. H: High-level output
L: Low-level output
Hi-Z: High-impedance
