

4 Form C Flat type

2 Form C Flat type

4 Form C Slim type  
(PC board)

2 Form C Slim type  
(PC board)

### FEATURES

#### 1. Compact, slim design

Use of high-performance flat electromagnetic design achieves 10.9 mm .429 inch profile, flat type thin package. Slim type, with width of 11.2 mm .441 inch, enables high-density mounting on PC boards.

#### 2. High reliability

Provides stable contact pressure needed for card lift-off contact driver method. The use of Ac clad twin contacts provides stable contact resistance and ensures high contact reliability.

#### 3. 2-coil latching types available

#### 4. Compatible with all major safety standards

UL and CSA certified, and complies with Japanese Electrical Appliance and Material Control Law.

### TYPICAL APPLICATIONS

1. Information processing and telecom equipment such as computers and terminal devices.

2. Gas hot air heating equipment and air conditioners.

3. Timer, temperature controller and other equipment that requires form factor reduction.

4. Transmission and measuring devices such as facsimile machines and electronic counting devices.

5. Control panels for industrial equipment such as machine tools, factory automation devices, and NC machines.

Compliance with RoHS Directive

### ORDERING INFORMATION

Notes: 1. UL/CSA approved type is standard.  
2. Amber sealed types are sealed and filled with inert gas (nitrogen gas).  
Sealed construction with terminals, case and base sealed shut with sealing resin.

# NC

## TYPES

<Standard type>

### 1. Flat type (PC board terminal)

Contact arrangement	Nominal coil voltage	Single side stable	2 coil latching
		Part No.	Part No.
2 Form C	12V AC	NC2D-JP-AC12V	—
	24V AC	NC2D-JP-AC24V	—
	48V AC	NC2D-JP-AC48V	—
	100V AC	NC2D-JP-AC100V	—
	3V DC	NC2D-JP-DC3V	NC2D-JPL2-DC3V

Notes: 1. Two coil latching relay 4 Form C series are for intermittent operation only. Power should be applied to coil continuously for no more than two minutes.  
 2. Coil resistance is the measured value at a coil temperature of 20°C 68°F. Compensate coil resistance by ±0.4% for each degree (°C °F) of coil temperature change.  
 3. "Maximum allowable voltage" is that value at maximum contact rating and maximum ambient temperature.  
 The graph shown in the data describes the inter-relationship; care should be taken to prevent the total of ambient temperature and the coil temperature rise from exceeding 120°C 248°F.

NOTES

1. Because the NC relay is polarized, the positive “+” and negative “-” connections to the coil should be done as indicated on the wiring diagram. If connected incorrectly, it may malfunction or fail to operate.
2. As a 2 coil latching type, under the stipulations of the Japanese Electrical Appliance and Material Control Law, because the terminals of NC relay coils have an insulation distance of more than 1.5 mm, NC relays can be used in power supply operating circuits of up to 100 V. When used in contact circuits, 200 V is the maximum voltage.
3. To maintain insulation between coils of 2 coil latching series, terminals ⑤ and ⑥ for flat series, and terminals ③ and ④ for vertical series should be connected to provide common return.

Figure 1 shows wiring that complies with Japanese Electrical Appliance and Material Control Law stipulations for power supply circuits. At the copper traces on PC boards, between terminals ③ and ④, as shown in Figure 2, apply epoxy resin (to thickness of more than 3 mm) or similarly adhesive to provide insulation.

4. 2 coil latching series 4 Form C are for intermittent operation only. Power should be applied to coils continuously for no more than two minutes. See page 30 for general cautions to be observed regarding latching relays.
5. While NC relays can be used with any transmission-wave current to their operation, due to slight weakening of the force of magnetic attraction, decreased resistance to vibration and shock should be taken into account.
6. The current that energizes the coil in an NC relay is AC type. Because the AC sine waveform is distorted, when testing, it is essential to use a measuring device that can properly characterize the distorted waveform. The operating power of the coil in the 100 V AC 4 Form C type is relatively higher than other NC types of AC relay and consequently, the total current applied through all the contacts should be kept below 10 A.
7. The AC type NC relay has a special magnetic design. As a result, once the a-side contacts have switched, the b-side contacts may once again go into a temporary ON state depending on the coil inrush phase. To ensure that this phenomenon does not occur, it is necessary to carry out sufficient practical testing with relays installed in actual devices.

8. When designing top and bottom view schematic diagrams, note that:
  - 1) “Top view” wiring diagram is indicated for the flat series because terminals can be seen from above.
  - 2) “Bottom view” schematic diagram is indicated for the vertical series because terminals cannot be seen from above.

9. Cautions for close proximity mounting  
When using slim series in close proximity, mount all relays facing the same direction. Different mounting directions may cause change in the relay characteristics because NC relays are polarized.

For Cautions for Use, see Relay Technical Information.

NC2 Flat type socket

NC4 Flat type socket

NC2 Slim type socket

NC4 Slim type socket

NC2 DIN terminal socket

**FEATURES**

• **Socket**

1) The vertical (slim) type with solder terminals has a retainer, which enables snap-in fixing on chassis, panels, and similar locations. Because the sockets for both solder terminals and PC boards firmly fix the relay at the time of insertion, once snapped in, spring clips are unnecessary.

2) For the flat type, pull up the hinged clasps in the direction of the arrows shown in the drawing after inserting the relay. Spring clips are unnecessary.

**Compliance with RoHS Directive**

**TYPES**

	Product name	Terminals	Part No.
Flat type socket	NC2-flat type PC board socket	P/C board	NC2-JPS
	NC2-flat, 2 coil latching type PC board socket	P/C board	NC2-JPL2S

**SPECIFICATIONS (common)**

Item	Specifications
Max. continuous current	Slim type: 5A 250V AC, Flat type: 5A 250V AC
Initial breakdown voltage	2,000 V AC (Except for coil to coil of L2 type: 1,500 V AC)
Initial insulation resistance	Min. 100MΩ (at 500V DC megger)
Heat resistance	150°C 302°F for 1 hour

Note: Do not insert or remove relays while in the energized condition.

## NOTES

1. Soldering should be done quickly to avoid damaging the thermoplastic body.
2. For solder terminal types, connect terminals as shown in the diagram at right to maintain insulation distance.
