## Precautions

## POSITIVE GUIDED CONTACTS

When NO contacts are welded, the coil will be non-energized so all NC contacts will maintain a distance between the contacts of 0.5 mm minimum. Likewise if NC contacts are welded, the coil will be energized so all contacts will maintain a distance between each other of 0.5 mm minimum.

## Safety Relays

A Safety Relay is a relay with which a safety circuit can be configured. For common precautions when using and handling relays, consult Omron.

## Contacts

The coil terminals have polarity (positive and negative).Operation is not possible if these are connected in reverse.
