PRODUCT DESCRIPTION

The SST12LP07A is a versatile power amplifier based on the highly-reliable InGaP/GaAs HBT technology.

The SST12LP07A can be easily configured for high-power applications with good power-added efficiency while operating over the 2.4- 2.5 GHz frequency band. It typically provides 28 dB gain with 30.8% power-added efficiency @ $P_{OUT} = 23.5$ dBm for both 802.11g and 802.11b.

The SST12LP07A has excellent linearity, typically ~2.5% added EVM at 20 dBm output power which is essential for 54 Mbps 802.11g operation while meeting 802.11g spectrum mask at 23.5 dBm.

The SST12LP07A also features easy board-level usage along with high-speed power-up/down control through a single combined reference voltage pin. Ultra-low reference current (total $I_{REF} \sim 2$ mA) makes the SST12LP07A controllable by an on/off switching signal directly from the base-band chip. These features coupled with low operating current make the SST12LP07A ideal for the final stage power amplification in battery-powered 802.11g/b WLAN transmitter applications.

The SST12LP07A has an excellent on-chip, single-ended power detector, which features wide-range (>15 dB) with dB-wise linearization. The excellent on-chip power detector provides a reliable solution to board-level power control.

The SST12LP07A is offered in 12-contact XQFN package. See Figure 2 for pin assignments and Table 1 for pin descriptions.
