

μA723C, μA723M, μA723Y PRECISION VOLTAGE REGULATORS

SLVS057C – AUGUST 1972 – REVISED NOVEMBER 1996

- 150-mA Load Current Without External Power Transistor
- Typically 0.02% Input Regulation and 0.03% Load Regulation (μA723M)
- Adjustable Current-Limiting Capability
- Input Voltages to 40 V
- Output Adjustable From 2 V to 37 V
- Direct Replacement for Fairchild μA723C and μA723M

description

The μA723C and μA723M are precision monolithic integrated circuit voltage regulators featuring high ripple rejection, excellent input and load regulation, excellent temperature stability, and low standby current. The circuit consists of a temperature-compensated reference-voltage amplifier, an error amplifier, a 150-mA output transistor, and an adjustable output current limiter.

The μA723C and μA723M are designed for use in positive or negative power supplies as a series, shunt, switching, or floating regulator. For output currents exceeding 150 mA, additional pass elements may be connected as shown in Figures 4 and 5.

The μA723C is characterized for operation from 0°C to 70°C. The μA723M is characterized for operation over the full military temperature range of -55°C to 125°C.

μ A723Y chip information

This chip, when properly assembled, displays characteristics similar to the μ A723C. Thermal compression or ultrasonic bonding can be used on the doped aluminum bonding pads. The chips can be mounted with conductive epoxy or a gold-silicon preform.

Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds: J or U package	300°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds: D or N package	260°C

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: Power dissipation = $[I_{(standby)} + I_{(ref)}] V_{CC} + [V_C - V_O] I_O$.
